

Item 07 – GRI Topic Standard Project for Climate Change – Draft GSSB basis for conclusions for GRI 103: Energy 2025

For GSSB review

Date	20 February 2025
Meeting	19 March 2025
Project	GRI Topic Standard Project for Climate Change
Description	<p>This document summarizes the significant issues raised by respondents on the GRI Energy exposure draft during the public comment period from 21 November 2023 to 29 February 2024. This document outlines the draft responses from the Global Sustainability Standards Board (GSSB) to the significant issues raised based on discussions and recommendations by the Climate Change Technical Committee.</p> <p>As the GSSB Due Process Protocol outlines, this document is not subject to voting for approval, is not part of the final Standard, and is non-authoritative.</p> <p>The full set of public comments can be downloaded from the Topic Standard Project for Climate Change page on the GRI website.</p>

This document has been prepared by the GRI Standards Division and is made available to observers at meetings of the Global Sustainability Standards Board (GSSB). It does not represent an official position of the GSSB. Board positions are set out in the GRI Sustainability Reporting Standards. The GSSB is the independent standard setting body of GRI. For more information visit www.globalreporting.org.

1 About this document

2 This document summarizes the significant issues raised by respondents regarding the [GRI Energy exposure](#)
3 [draft](#) during the public comment period from 21 November 2023 to 29 February 2024.

4 The document includes the feedback provided by respondents through the public comment survey hosted on
5 the [Topic Standard Project for Climate Change page](#) and the feedback submitted by email.

6 All individual comments received, together with an analysis of the significant issues raised, were considered
7 by the GRI Climate Change Technical Committee. The recommendations of the technical committee (TC)
8 were shared with the Global Sustainability Standards Board (GSSB) for consideration in the development of
9 the Topic Standards for Climate Change and Just Transition, and Energy. This document provides a
10 summary of how the GSSB has responded to the significant issues raised in the public comment period.

11 The full set of comments received can be downloaded from the [Topic Standard Project for Climate Change](#)
12 [page](#) on the GSSB website.

13 *GRI 103: Energy 2025* can be downloaded [[here](#)].

14 Introduction

15 Objectives for revising the GRI climate change-related disclosures

16 The [project proposal](#) for the review of the climate change-related disclosures in *GRI 302: Energy 2016*, *GRI*
17 *305: Emissions 2016* (Disclosures 305-1 to 305-5), and *GRI 201: Economic Performance 2016* (Disclosure
18 201-2: Financial implications and other risks and opportunities due to climate change) was approved by the
19 GSSB, GRI's independent standard-setting body, at its meeting on February 2023. The project's primary
20 objective was to review the GRI climate change-related disclosures to represent internationally agreed best
21 practices and align with recent developments and the relevant authoritative intergovernmental instruments in
22 the field of climate change. The project also aimed to incorporate new issues to reflect the stakeholders'
23 expectations related to reporting climate change-related impacts that have evolved and broadened beyond
24 energy and GHG emissions reporting.

25 The project followed the [GSSB Due Process Protocol](#). In May 2023, the GSSB appointed a multi-stakeholder
26 [technical committee](#) of 13 experts representing all five GRI constituencies. The technical committee informed
27 the revision of the Standards by convening throughout 2023-2024 in seven meetings.

28 Scope of the public comment

29 The Climate Change and Energy Standard exposure drafts were open for public comment, as required by
30 the [GSSB Due Process Protocol](#), from 21 November 2023 to 29 February 2024.

31 Respondents were invited to submit feedback on the clarity, feasibility, and relevance of the significant
32 proposals in the exposure drafts.

33 Several outreach activities were carried out during the public comment period, including four global webinars
34 and ten regional events. Approximately 3,000 individuals registered for the global webinars, and almost
35 1,000 participants attended the regional webinars in Africa, China, Latin America, and North America. In
36 addition, GRI participated in four events at COP 28. Through the outreach activities, GRI reached a global
37 audience of over 10,000. [Appendix 1. Participation in regional events and webinars](#) contains an overview of
38 these events.

39 Comments collected during PCP activities such as workshops or webinars, though not considered official
40 public comment submissions, were also taken into account when they aided understanding or flagged a
41 significant issue not raised in the official submissions.

42 Overview of participation in public comment

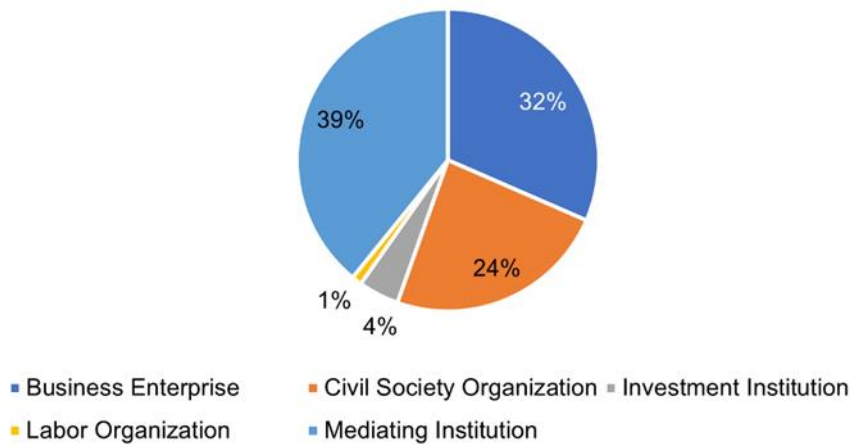

43 Respondents were invited to submit comments on the Climate Change and Energy Standards exposure draft
44 using an online survey. The link to the survey was made available on the Climate Change project page.
45 Respondents could also submit an official letter or statement to climate@globalreporting.org.

46 A total of 92 submissions from individuals and organizations were received, consisting of 89 completed
47 surveys and three letters. See Figures 1 and 2 for a breakdown of submissions by region and stakeholder
48 constituency. Submissions were received from all five stakeholder constituencies represented by the GSSB:
49 business enterprises, civil society organizations, investment institutions, labor, and mediating institutions.

50 **Figure 1. Breakdown of all submissions received by geographic region**

51 **Figure 2. Breakdown of all submissions received by constituency**

52 For more details on the submissions received, see:

- 53
- Full set of comments on the [Climate Change project page](#).

54 Methodology for analyzing comments

55 The Standards Division collated all comments submitted by respondents.

56 Each comment was categorized by disclosures. Then, each comment was analyzed by:

- type – e.g., requirement, guidance, general;
- theme – e.g., transition plan, CAPEX, biodiversity;

- category – e.g., clear, unclear, not feasible, redundant;
- action – e.g., draft, TC discussion, climate team discussion.

57 When a respondent raised several points in one comment, the points were separated into distinct comments.

58 The qualifiers indicated in Table 1 have been used to indicate the percentage of comments provided on
 59 specific items. Given that the survey mostly contained open questions to enable respondents to provide
 60 feedback on sections of interest, not all respondents provided comments on all sections of the exposure
 61 draft. Consequently, certain sections or disclosures have a relatively low number of comments compared to
 62 the overall number of comments.

63 Most of the feedback received on the Energy exposure draft falls into the qualifiers ‘one’, ‘a few’, and ‘some’.
 64 No feedback that falls into ‘many’ or ‘majority’ qualifiers was received.

65 The same qualifiers have been used to indicate the percentage of respondents who expressed support for
 66 the new disclosures introduced by the Climate Change Project.

67 **Table 1. Qualifiers indicating the percentage of comments/respondents.**

Qualifier	Comments
Majority	> 50%
Many	30-50%
Some	10-30%
A few	< 10%
One	1

68 **Significant issues and GSSB responses**

69 In line with the [GSSB Due Process Protocol](#), this section summarizes the significant issues raised by
 70 respondents, outlines proposed changes to the Energy Standards exposure draft, and explains why
 71 significant changes recommended by respondents were, or were not, accepted by the GSSB.

72 The significant issues identified have been organized into the following sections:

- 73 • Issues by disclosure
- 74 • Cross-cutting issues

75 This section includes references to the Energy exposure draft and the final version of *GRI 103: Energy 2025*.
 76 The titles in the exposure draft are used when referring to the content of the exposure draft. When referring
 77 to the content in the final Standard, the titles in *GRI 103: Energy 2025* are used.

78 Where text from *GRI 103: Energy 2025* is different from that in the exposure draft, the wording is provided in
 79 bold throughout the basis for conclusion.

80 GRI 103: Energy

81 Issues by disclosure

82 EN-1 Energy policies and commitments (GRI 103-1 in the final Standard)

83 The majority of respondents expressed appreciation for this new management disclosure, recognizing that it
84 effectively increases transparency by requiring organizations to report on energy policies, efficiency,
85 renewable energy use, and decarbonization efforts, aligning with global goals and, therefore, being a
86 relevant disclosure.

a) Impacts associated with energy consumption and transition to renewables

87 A few comments suggested adding content on impacts related to energy consumption and the transition to
88 renewable energy, preferably at the requirement level.

89
90 *GSSB response:* Requirement 103-1-b was included to report impacts related to energy consumption and
91 the transition to renewable energy sources. Further guidance was developed on this requirement to report
92 impacts on people and the environment. This includes examples of positive and negative impacts on people
93 and biodiversity. The guidance also recommends reporting on actions taken by the organization to manage
94 those impacts.

b) Energy policy in the value chain

95 A few comments were received on the importance of reporting energy policies that apply to the value chain
96 (e.g., procurement policies)

97 *GSSB response:* Disclosure 103-1 covers policies and commitments across the organization's activities and
98 upstream and downstream value chains. A clarification was added in the guidance to 103-1-a as follows:
99 **[This requirement covers policies and commitments that apply to the organization's activities and its
100 upstream and downstream value chain].**

101 EN-2 Energy consumption and self-generation within the organization (GRI 103-2 in 102 the final Standard)

a) Scope and structure of Disclosure 103-2

103 A few comments were received on the overall requirements' structure, requirements, and guidance clarity.

104 Further comments asked for more clarity on the scope of the disclosure, specifically on whether and how
105 energy generation is covered, and pointed out the absence of requirements on self-generated non-
106 renewable electricity consumption (parallel to EN-2-c) and fuel sold (parallel to EN-2-d).

107 *GSSB response:* The requirements' wording and guidance information were rearranged, and additional
108 guidance was introduced to enhance clarity.

109 In order to clarify the scope of the disclosure, its title was changed from 'Energy consumption and generation
110 within the organization' to 'Energy consumption and self-generation within the organization'. A sentence was
111 added in the guidance of 103-2-a to allow ('can') for reporting on the consumption of fuel purchased and fuel
112 self-generated separately. This information is not required as fuel self-generation is primarily considered
113 relevant for some sectors such as oil and gas and coal.

114 Similarly, requirements on self-generated non-renewable electricity consumption and fuel sold were not
115 added due to the sectoral nature of the information.

b) Contractual instruments' quality criteria and purchased electricity information

116 A few comments were received on the formulation of contractual instruments' quality criteria, particularly
117 physical and temporal connection, expressing concerns about their feasibility and universal applicability.

118 A few comments requested the inclusion of information on how to report on renewable electricity certificates
119 (RECs), both purchased and consumed and sold after self-generation.

120 Another few comments asked for further guidance on using national grid/grid average/residual mix
121 information in reporting the breakdown by renewable and non-renewable energy sources for purchased
122 electricity when contractual instruments are unavailable.

123 *GSSB response:* In order to facilitate the applicability of quality criteria for all the contractual instruments in
124 all jurisdictions, the quality criteria on physical and temporal connection were rephrased and aligned with
125 GHG Protocol Scope 2 Guidance. Guidance to 103-2-e was modified to recommend that organizations
126 describe how they strive for temporal and physical connection for contractual instruments. Examples were
127 added.

128 It was decided to include a reference to Energy Attribute Certificates (EACs), a more jurisdiction-neutral term
129 than RECs, throughout the disclosure in reference to contractual instruments for purchased electricity
130 consumption. A recommendation was added in the Guidance to 103-2-d on self-generated renewable
131 electricity sold to report a breakdown by electricity sold together with contractual instruments and electricity
132 sold with attributes retained.

133 Guidance was added to 103-2-b to clarify that the organization should report whether the information on
134 purchased electricity from renewable sources was calculated based on average grid data (location-based) or
135 contractual instruments purchased. It should also include information on how it purchases electricity from the
136 grid and the percentage of energy sources from the grid mix.

c) Energy consumption activities

137 A few comments asked for more detailed guidance on reporting the activities in which energy is consumed.

138 *GSSB response:* Additional guidance was drafted, including examples explaining that activities refer to
139 drivers of energy consumption and suggesting ('can') reporting a breakdown by the top five energy activities
140 of organizations that result in energy consumption and combining all other activities into an 'other' category.

EN-3 Upstream and downstream energy consumption (GRI 103-3 in the final Standard)

a) Excessive reporting burden

143 Some comments expressed worries about the reporting burden of collecting the data to report under
144 Disclosure EN-3 in terms of:

- 145 a) Feasibility of collecting the data for the upstream and downstream value chain.
- 146 b) Accuracy of the data in the downstream value chain, concerns about 'product energy footprint'.
- 147 c) Methodological challenges to reporting energy consumption in the upstream and downstream value
148 chain.

149 Some comments expressed that they would like Disclosure EN-3 to be deleted. Other responses highlighted
150 the importance of keeping Disclosure EN-3.

151 A few comments suggested replacing the metrics of EN-3 to give it a qualitative focus, making the disclosure
152 a narrative one, and focusing more on policies and actions involving the value chain to facilitate the energy
153 transition.

154 *GSSB response:* After consultation with technical experts and best-in-class reporters, it was agreed to keep
155 the ambition and the metrics on upstream and downstream energy consumption in the disclosure, as
156 qualitative aspects concerning energy transition are already covered under 103-1.

157 The requirement text of 103-3-a was changed to require listing the upstream and downstream categories in
158 which significant energy consumption occurs. Further guidance was added on how to compile the
159 information required. Moreover, the breakdown by category was moved to the guidance as a
160 recommendation.

161 Furthermore, additional guidance was added specifying that if the organization is unable to use primary data
162 to report on significant energy consumption, it can use estimations. New guidance to 103-3-a explains that
163 the organization should use all reasonable and supportable information available at the reporting date to
164 measure upstream and downstream energy consumption.

165 **EN-4 Energy intensity (GRI 103-4 in the final Standard)**

a) Intensity ratio on value chain energy consumption

166 Some feedback expressed doubts about calculating energy intensity using energy consumption upstream
167 and downstream in the value chain (under requirement EN-4-b-ii), noting that upstream and downstream
168 energy consumption is difficult information to gain.

169 GSSB response: Guidance was added to 103-4-b, explaining the transparency purpose of the requirement,
170 which is to report what is covered by the energy intensity ratio. This allows the organization to select the
171 scope of the energy consumption data included without the requirement to report each option.

b) Comparability issue

172 A few comments noted that the requirements in Disclosure EN-4 are very flexible and do not enable easy
173 comparisons among organizations, suggesting the need to require specific denominators instead.

174 A few comments suggested including methodological guidance on calculating energy intensity to improve
175 and ease comparability.

176 GSSB response: Guidance to 103-4-a (on the choice of a denominator relevant to the organization's
177 industry) was expanded, including examples and the recommendation to report possible industry standards
178 according to which it calculated the ratio(s) reported, along with details on the methodologies used and
179 assumptions made.

180 Feedback on additional sectoral guidance will be passed on to the relevant GRI Sector Standards projects.

181 **EN-5 Reduction in energy consumption (GRI 103-5 in the final Standard)**

a) Value chain energy consumption reduction

182 Some comments noted that it is not always feasible to report energy reduction in the value chain (under
183 requirement EN-5-c) due to difficulties collecting data from upstream and downstream value chains.

184 GSSB response: Guidance was added to requirement 103-5-c, explaining the transparency purpose of the
185 requirement, which is to report what is covered by the energy consumption reduction, allowing the
186 organization to select the scope of the energy consumption data included without the requirement to report
187 each option.

b) Reductions in energy requirements of products and services

188 A few comments recommended keeping a stand-alone disclosure on products and services. However, most
189 of these comments underlined the importance of this information in sector-specific cases.

190 GSSB response: The disclosure structure was maintained after consultation with technical experts. This was
191 decided based on the following:

- 192 • the current disclosure formulation allows organizations to report information on energy requirements
- 193 of products and services (under requirement 103-5-c, for example, categories 10, 11, or 12);
- 194 • most of the comments were sector-specific in nature.

195 Moreover, the feedback on additional sectoral guidance on reductions in energy requirements of products
196 and services in sector-specific cases will be passed to the relevant GRI Sector Standards projects.

197 **Cross-cutting issues**

a) Methodology framework and assurance

198 A few comments highlighted the importance of providing guidance or methodologies to calculate energy
199 consumption, set targets, and quantify energy consumption reductions to enhance comparability. In this
200 context, data assurance was also mentioned to increase robustness.

201 GSSB response: As there is currently no globally accepted authoritative source for methodology on these
202 themes and based on GRI's role as a reporting standard setter (not a methodological framework), it was
203 decided not to mention any specific framework, keeping the focus on reporting the chosen methodological
204 framework to enhance transparency.

205 Regarding Disclosure 103-5 (Reduction in energy consumption), in order to provide methodological guidance
206 and normalize data and in line with the changes made to Disclosure 102-4-j (GHG emissions reduction
207 targets and progress), the addition was made to requirement 103-5-a to report whether the reduction is due
208 to the organization's conservation and efficiency initiatives or due to other factors and an explanation of how
209 this was assessed.

This document does not represent an official position of GSSB
